Dental Dam

HySolate Dental Dam

A clever move in tooth isolation

- ✓ The lighter colors have the advantage of naturally illuminating the operating field whereas the darker colors can help with visual contrast
- ✓ Powder free, low protein latex dam reduces the risk of developing latex hypersensitivity
- ✓ Increased visibility on the treatment site through isolation
- ✓ Acts as an infection control barrier
- ✓ Creates a dry operating field

SciCan OPTIM1

One-step cleaner & disinfectant

FAST BROAD-SPECTRUM DISINFECTANT

- ✓ Tuberculocidal & Fungicidal in **1 minute**
- ✓ Bactericidal & Virucidal in **30 seconds** according to EN 13727 and EN 14476

EFFECTIVE ONE-STEP CLEANER

- ✓ An effective 1 step cleaner disinfectant removes the organic debris while it disinfects

SAFE AND GENTLE

- ✓ Non-Toxic
- ✓ Non-irritating to skin, eyes and respiratory system
- ✓ No GHS hazard pictograms, signal words or statements
- ✓ Leaves no active residue; doesn't contribute to antimicrobial resistance

SciCan OPTIM 1 Wipes

MicroMega K-Files

The K file is used to explore the root canal before the shaping step. This file gives a first indication of the anatomy of the canal, this step is to be completed with an X-ray. During the first exploration, the K-Files helps to determine the working length, with or without the use of an apex locator and allows to remove the main mechanical constraints by a widening action.

6 × K-Files B6

B6 K-Files n006 L25 sterile	60029718
B6 K-Files n006 L31 sterile	60029719
B6 K-Files n008 L25 sterile	60029721

B6 K-Files n025 L25 sterile	60029733
B6 K-Files n025 L31 sterile	60029734

MicroMega K-Reamers

Originally used to locate canal entrances, pins are now mainly used at the end of root canal preparation as finishers, to remove mineral and organic tissue residues or to place filling material.

6 × K-Reamers B6

B6 K-Reamers n006 L25 sterile	60029655
B6 K-Reamers n006 L31 sterile	60029656
B6 K-Reamers n008 L25 sterile	60029658

CanalPro Jeni

Digital assistance system for canal preparation

The new CanalPro Jeni endomotor has a patent-pending digital assistance system for canal preparation, which uses complex algorithms to control the file movement at millisecond intervals. The rotary motion and speed are continuously controlled based on current intensity and torque.

7" Panorama colour touch display
High contrast, clear landscape format

Bluetooth foot switch
The wireless foot switch is automatically connected to the control unit.

 New, autonomous assistance system for canal preparation

 Perfectly matched to four file systems

 Apex locator – measuring length without interruption

 Reach your objective efficiently with the Jeni mode

 Irrigation with aplomb

 File-Performance Indicator

 Flexible use via Doctor's Choice function

 Future-proof with updates

CanalPro Jeni, complete set

SYNERGY D6 / D6 Flow

Beauty made simple

This universal composite is completely focused on simplifying shade selection without neglecting the aesthetic aspects. Its consistency is firmer compared to BRILLIANT EverGlow. A special feature is the duo-shade system which applies for 6 of the dentin shades. Thanks to the excellent optical self-blending properties one duo shade matches 2 Vita™ shades (e.g. A1/B1 or A2/B2). As a result a small number of shades is sufficient to cover a wide range of tooth shades. In total, the assortment of SYNERGY D6 offers 7 dentin shades and 1 enamel shade.

on SYNERGY D6
and D6 Flow

SYNERGY D6 Flow is the perfect complement to all other SYNERGY D6 products. The formula of Synergy D6 Flow is based on the technology of SYNERGY D6. It is flowable and easily used even in the tiniest cavities. The material is stable, yet flows gently under pressure to ensure easy handling and precision application.

DuoTEMP

Double security keeps you smiling!

- ✓ Dual-cure
- ✓ High marginal integrity
- ✓ Easy removal
- ✓ One material with multiple indications

Marginal Seal Comparison

Cross-sectioned extracted human molars were filled with cured DuoTEMP and then immersed in methylene blue dye to determine the marginal sealing properties. DuoTEMP demonstrated excellent sealing properties. Source: internal data.

*Not a trademark of Coltene

Easy, time saving application

One component without mixing. Good retention in the cavity. Easy removal.

A-SILICONE IMPRESSION MATERIAL

AFFINIS

The crowning
in level of detail

Still one of the fastest A-silicones.

AFFINIS fast, with a maximum total setting time of 2 min 10 sec guarantees optimum efficiency and saves time.

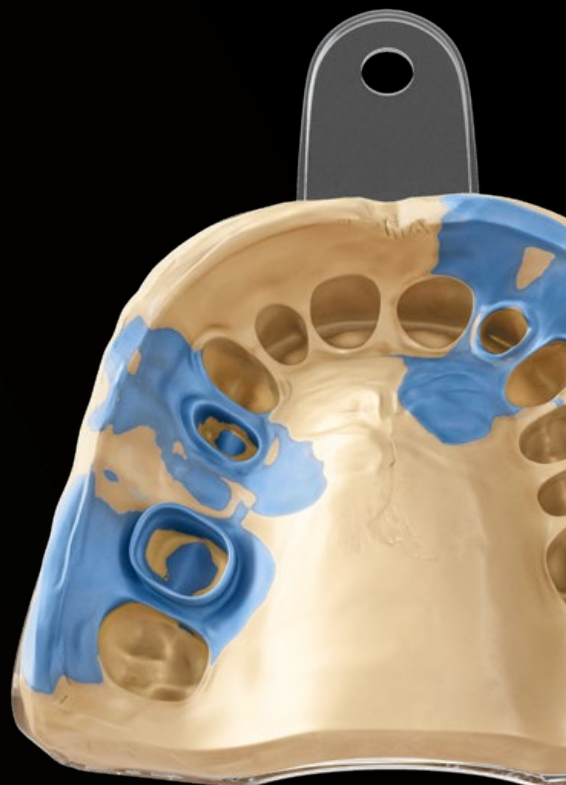

Precise moulding of every detail even under the most difficult conditions. The highly active surfactant system is characterized by excellent surface affinity in a moist environment.

Confidence during impression taking. Self-contouring consistency prevents air bubbles and distortions.

Easy monitoring for success. AFFINIS PRECIOUS wash materials with impressive gold and silver pigmentation for excellent readability and detail reproduction.

Impressions with AFFINIS are convincing right from the start

With the AFFINIS product family, you will be well prepared for any patient situation, no matter how complicated. This reliable, precise impression material is characterised not only by its speed but also by its flowability and, where necessary, by the required stability. For over 40 years, our customers have relied on our know-how in the production of silicone-based impression materials.
